

Cloud & AI Integration Developer

Innovation & Enablement Team

Oracle Technologies, AI & Front-End Development

About Us:

Redfaire is a growing international technology company headquartered in Limerick, Ireland, helping global organisations modernise their Oracle enterprise applications (Fusion and JD Edwards), move to Oracle Cloud Infrastructure (OCI), and unlock value through automation, analytics, and innovation.

Redfaire offers the chance to work with leading technologies while learning from highly experienced consultants in a supportive, collaborative environment. Our work spans cloud, integrations, AI, and machine learning — providing strong foundations for a career in enterprise technology.

With offices in Ireland, the UK, and the USA, and as a founding partner of Redfaire International, we deliver impactful solutions to clients worldwide — offering real opportunities to grow in a global organisation.

About the Role:

We are looking for a motivated and curious Junior Cloud & AI Integration Developer to join our Innovation & Enablement team. This role focuses on building and prototyping modern solutions using Oracle Cloud technologies, AI services, and system integrations. You will work closely with experienced consultants and architects on research, proof-of-concepts, and customer-driven innovations—combining AI, APIs, and cloud platforms to solve real-world business problems.

This is an ideal opportunity for an early-career developer who is passionate about learning, experimenting with new technologies, and applying them in practical scenarios.

Responsibilities:

Working alongside senior architects and consultants on innovation projects, you will :

- Support senior architects and consultants in researching and investigating Oracle technologies, with a particular focus on AI and emerging capabilities (Oracle AI Agents, OCI Generative AI, Oracle Digital Assistant, AI-powered analytics).
- Build and develop front-end applications and user interfaces to support solutions delivered to customers – ensuring a quality user experience and responsive design.
- Learn and grow within a supportive team environment, developing expertise in Oracle Cloud technologies, integration patterns, and modern development practices.
- Contribute to proof-of-concept (POC) development and prototyping activities, helping to validate new technologies and approaches before customer implementation.
- Assist with technical documentation, creating guides, setup instructions, and knowledge base articles for internal teams and customers.
- Be guided by experienced consultants and architects who will mentor you through Oracle technologies and customer engagement processes.
- Stay up to date with the latest developments in AI, cloud technologies, and front-end frameworks.
- Collaborate with team members, share knowledge, and contribute ideas to improve tools, processes, and customer deliverables.

Skills and Behaviours required:

- Proficiency in JavaScript and modern front-end frameworks (React, Vue, or similar)
- Proficiency in Python for scripting, automation, and API integration
- Strong HTML/CSS skills with attention to responsive design and user experience
- Understanding of REST APIs and web service integration concepts
- Enthusiasm for innovation, AI and emerging technologies – curiosity to explore and learn new tools
- Basic understanding of Large Language Models (LLMs) and their practical applications (e.g., chatbots, document processing, automation)
- Interest in working with LLMs, including prompt design, API usage, and building AI-powered features
- Ability to write effective prompts and critically evaluate AI-generated outputs
- Good communication skills and ability to work collaboratively in a team (both local and remote)
- Self-motivated with a problem-solving mindset

Bonus Skills (Not Essential)

- Familiarity with Oracle development tools (Oracle APEX, Visual Builder, JET)
- Exposure to Oracle Cloud Infrastructure (OCI)
- Experience with version control (Git) and collaborative development workflows
- Understanding of databases and SQL
- Interest in AI/ML concepts, prompt engineering, or chatbot development
- Exposure to AI coding assistants (e.g., Claude, OpenAI Codex, GitHub Copilot)
- Interest in leveraging AI tools to improve development productivity
- Interest in AI agents and automation in real-world applications

What we offer:

- Career growth within an expanding global award-winning Oracle Partner recognised for excellence.
- Mentorship from experienced Oracle consultants and solution architects
- Hands-on experience with cutting-edge AI and cloud technologies
- A supportive team environment that encourages learning and growth
- Clear career progression path within the Innovation & Enablement team
- Supportive team culture with ongoing training and mentorship.
- Competitive salary and benefits package.
- Opportunity to engage in flexible working arrangements, including remote options, to help you maintain a healthy work-life balance.

Redfaire is an equal opportunities employer. We are committed to building an integrative culture where everyone feels welcomed and supported. Our inclusive workplace provides an environment that will support your development no matter your gender, civil status, family status, sexual orientation, religion, age, disability, education level, or race.
